

Arecont Vision® Technology Partner Program Expands Wirelessly with Siklu

Manufacturer of Gigabit Throughput Wireless Products is Now Program Member

Los Angeles, CA (25 April 2016) – [Arecont Vision®](#), the industry leader in [IP-based megapixel camera technology](#), has announced that Siklu, a leading manufacturer of gigabit throughput wireless products, has joined the Arecont Vision Technology Partner Program. Siklu products are available in the Arecont Vision MegaLab™ as part of the agreement to enable pre-installation integration and new product testing.

“The Arecont Vision megapixel cameras have completely changed the landscape on how security consultants and systems integrators design video surveillance systems,” says Ilan Moshe, General Manager of North America, Siklu. “The Siklu radios are designed to handle large bandwidth applications without the need to trench or pull fiber optics. Wirelessly transmitting high data rates at a cost effective price gives more users access to high quality, high resolution cameras for their video security system.”

The Siklu gigabit throughput E-band (70/80 Ghz) and V-band (60 Ghz) radios are the market’s most cost-effective solutions for short-range wireless point-to-point links. They are based on more than 30 patents, and include the first SiGe E-band chip and other unique achievements. Siklu has sold thousands of radios worldwide to service providers, mobile operators, wireless security network operators, and enterprises. And with 30% market share, Siklu firmly leads the millimeter wave radio market. Top operators have tested their radios rigorously, and they are now deployed in all climates, working smoothly even through monsoons and hurricanes.

“The innovation that Siklu has put into their products allows for customers to take advantage of the latest and greatest, best-of-breed video technology available in the security market”, says Jason Schimpf, Director of Sales Operations & Partner Relations, Arecont Vision. “I am excited to have a company like Siklu in the Arecont Vision Technology Partner Program because they bring more reliable wireless capability to the benefit of our customers.”

The Arecont Vision Technology Partner Program includes sales, development, and support contacts between the two companies in order to better engage with end user customers and integrators, integrate new features and technology, and quickly resolve customer support issues.

ABOUT ARECONT VISION

Arecont Vision is the leading manufacturer of high-performance megapixel IP cameras. Arecont Vision products are made in the USA. MegaVideo® and SurroundVideo® massively parallel image processing architectures are now in their 5th generation and represent a drastic departure from traditional analog and network camera designs. All-in-one products such as the MegaDome®, MegaView®, MegaBall®, and MicroDome® series provide installer friendly solutions.

ABOUT SIKLU

Siklu has been committed to reducing the cost of high capacity wireless backhaul solutions since 2008. The company's success centers on an innovative silicon-based design of the E-band radio system and components that has resulted in systems priced as low as 20% of competition. The EtherHaul delivers Gigabit speeds over the uncongested millimetric wave spectrum and is ideal for a wide range of urban and metropolitan Ethernet wireless backhaul applications. Serving providers around the world, Siklu Communication is based near Tel Aviv, Israel. Learn more at www.siklu.com.
